**Dog Information (Please include a pedigree)**

Dog’s Registered Name:__________________________________________________________

Call Name:_________________ AKC Registration #:_________________ Date of Birth:_________________

Coat Color:_________________ Sex (circle):  M / F Intact / Spayed / Neutered Date of spay/neuter:_________________

Sire's Name:_________________ AKC Registration #:_________________

Dam's Name:_________________ AKC Registration #:_________________

Was this dog produced by (circle): Natural breeding/fresh semen Chilled AI Frozen AI Not sure

**Owner Information**

Owner's Name:_________________________________________________________________________________

Address:_____________________________________________________________________________________

City: ___________________________ State: ___________________________ Zip Code: ________________

Phone:_________________________ E-mail:___________________________

**Health Information**

Healthy (circle): YES NO

General comments regarding your dog’s health (allergies, arthritis, infections, surgeries, etc.):

________________________________________________________________________________________________

________________________________________________________________________________________________

Is your dog taking any long term (>6 months) medications or supplements (circle)? YES NO

If yes, please indicate medications or supplements, dose and reason for taking. For example, Thyro-Tabs®/0.2mg daily/hypothyroidism, Cosequin®/1 tablet daily/arthritis.

_______________________________________________________________________________________________

_______________________________________________________________________________________________

Has your dog been vaccinated for rabies (circle)? YES NO

At what interval is the rabies vaccine given (check)?

( ) Every year    ( ) Every 3 years    ( ) Never    ( ) The rabies vaccine is not available where I live

( ) Other (explain) ________________________________________________________________
Addison’s Disease Information

Addison’s Disease (circle):  YES   NO (continue to page 3)

Age at onset: _____years _____months          Age at diagnosis: _____years _____months

If your dog is spayed or neutered, was Addison’s disease diagnosed (circle) prior to or after spay or neuter?

What specific test was used to determine the diagnosis of Addison's disease? (check all that apply) Include copies of medical records pertinent to diagnosis and blood test results at the time of diagnosis. Your veterinarian can fax the information to the Oberbauer Lab, Department of Animal Science 530-752-0175.

(  ) ACTH test        (  ) Complete blood count (CBC)
(  ) Electrolytes  Na/K Ratio: ______________        (  ) Ultrasound
(  ) Other (describe): ____________________________

Addison’s diagnosis:
(  ) Primary (both glucocorticoid and mineralocorticoid deficiencies)
(  ) Atypical (glucocorticoid deficiency)
(  ) Secondary (ACTH deficiency – low plasma ACTH detected)
(  ) Not Sure

If your dog has Addison's disease, what symptoms prompted you to go to the vet? (check all that apply)
(  ) Addisonian crisis (required immediate emergency treatment)
(  ) Bloody stool
(  ) Collapse
(  ) Depression
(  ) Diarrhea
(  ) Dehydration
(  ) Hair loss
(  ) Hyperpigmentation of the skin (darkening and thickening of the skin)
(  ) Increased thirst
(  ) Increased urination
(  ) Lack of appetite
(  ) Lethargy
(  ) Low body temperature
(  ) Shaking
(  ) Weak pulse
(  ) Weight Loss
(  ) Vomiting
(  ) Other (describe): ____________________________

List any medications your dog currently takes for Addison’s disease (check all that apply):
(  ) Dexamethasone        (  ) Fludrocortisone (Florinef ™)
(  ) DOCP (Percorten-V™)    (  ) Prednisone/Prednisolone
(  ) Supplement (type): ____________________________
(  ) Other (describe): ____________________________

Was your dog on any type of steroid treatment prior to diagnosis of Addison's disease (circle)?  YES  NO

Please indicate the type of steroid, the reason for steroid treatment and duration of treatment:
Epilepsy Disease Information

Epilepsy - has your dog ever had a seizure? (check)
   ( ) YES – once (continue below)
   ( ) YES - more than one seizure (continue below)
   ( ) NO - never (continue to page 7)

   Age at first seizure: _____years _____months

If your dog is spayed or neutered, were seizures diagnosed (circle) prior to, or after spay or neuter?

Has a veterinarian diagnosed seizures/epilepsy in your dog? (circle) YES NO

Please list all veterinarians who have seen your dog for seizure-related issues.

Seizures are (check all that apply):

   ( ) Partial or Focal (typically localized to one side of the body, usually remains conscious)
   ( ) Cluster (multiple seizures within a short time period with interspersed periods of consciousness)
   ( ) Generalized (involves entire body, may lose consciousness, may stop breathing)

   Types of generalized (check if known):
      ( ) Tonic-Clonic (Grand Mal – uncontrollable muscle activity/paddling, collapse, salivation, urination, defecation)
      ( ) Tonic (abrupt non-vibratory muscle contractions; legs flex and relax)
      ( ) Atonic (brief attack with rapid recovery)
      ( ) Clonic (usually rare and associated with elevated temperatures)
      ( ) Myoclonic (brief muscle jerks often triggered by startling sights or sounds)
      ( ) Absence (Petit mal – brief with shaking/tilting of head, staring/gazing, licking lips, eyes roll upward)
   ( ) Not Sure
Frequency of seizures (give number):

_____ times a day
_____ times a week
_____ times a month
_____ times a year

In general, how long does a seizure last? (check)

( ) Less than a minute
( ) One minute to five minutes
( ) Five minutes to ten minutes
( ) Longer than ten minutes
( ) Not Sure

Do seizures occur at any particular time of day? (check all that apply)

( ) midnight - 6 am
( ) 6am - noon
( ) noon - 6 pm
( ) 6 pm - midnight
( ) no particular time

When does your dog have seizures? (check all that apply)

( ) While resting
( ) While sleeping
( ) While awake during normal activity
( ) While playing
( ) When exercising
( ) During physically stressful activities
( ) Following physical stressful activities
( ) During mentally stressful activities
( ) When dog is left alone
( ) With sexual activity
( ) With weather changes
( ) Certain season of the year (describe): ______________________________________
( ) Before eating
( ) After eating
( ) After not eating for a long period of time
( ) When ill
( ) When highly aroused (aggression, etc.)
( ) No predisposing factors (usually seem completely random)
( ) Other (describe): _______________________________________________________

Prior to a seizure, does your dog (check all that apply):

( ) Appear nauseous       ( ) Nothing in particular
( ) Vomit                 ( ) Other (please describe):________________________
( ) Show salivation/drooling
( ) Get restless
( ) Seek out owner contact
( ) Become aggressive
Please select any of the following that apply to your dog during a seizure:

- Breathing stops briefly
- Loss of consciousness
- Conscious, but loss of awareness of surroundings
- No response to commands
- Stiffening of neck and limbs
- Sitting or falling to the ground (lose limb muscle tone)
- Lack of coordination
- Jerking motion of single/multiple limbs
- Rhythmic contraction or flexion of single limb
- One part/side of body behaves differently from the rest
- Generalized convulsions
- Change in posture
- Restlessness
- Chasing tail
- Moving in circles
- Temporary loss of vision
- Repetitive blinking
- Staring

- Following imaginary objects (e.g., fly snapping)
- Trembling
- Head tremor
- Twisting head
- Twisting facial muscles
- Drooling
- Chewing or lip smacking
- Opening and closing mouth
- Does not recognize owner
- Trying to get near people
- Pressing head against object/person
- Fatigue
- Aimless wandering
- Aggression
- Thirsty/drinking water
- Hungry
- If inside, asks to go outside
- Reluctance to get up
- Vomiting
- Retching
- Responds if you call his/her name
- Responds to commands
- One part/side of body behaves differently from the rest
- Generalized convulsions
- Change in posture
- Restlessness
- Chasing tail
- Moving in circles
- Temporary loss of vision
- Repetitive blinking
- Staring

Please select any of the following that apply to your dog immediately after a seizure:

- Fatigue
- Aimless wandering
- Aggression
- Thirsty/drinking water
- Hungry
- If inside, asks to go outside
- Reluctance to get up
- Vomiting
- Retching
- Responds if you call his/her name
- Responds to commands
- Other (describe): _____________________________

How long does your dog take to return to normal after a seizure?

- Less than 5 minutes
- 5-30 minutes
- 30-60 minutes
- 1-2 hours
- > 2 hours
- Behaves normally right after the seizure
List any prescribed medications your dog currently takes for seizures (check all that apply):

(  ) Clonazepam
(  ) Diazepam (Valium®)
(  ) Felbamate
(  ) Gabapentin
(  ) Levetiracetam (Keppra®)
(  ) Neurontin
(  ) Phenobarbital
(  ) Potassium Bromide (KBr)
(  ) Primidone
(  ) Zonisamide
(  ) Other (describe): ________________________________

How effective is the medication(s) in controlling the seizures? (check all that apply)

(  ) Stopped seizures completely
(  ) Reduced number of seizures by half
(  ) Reduced number of seizures by a little
(  ) Reduced intensity of seizures
(  ) Reduced duration of seizures
(  ) No effect
(  ) Other (describe): ________________________________

Does your dog undergo other types of treatment for seizures (e.g., acupuncture, herbal supplements, any other complementary alternative medicine (CAM))? Please describe: ____________________________________________

________________________________________________________________________________
________________________________________________________________________________
________________________________________________________________________________

Has your dog ever had any type of head trauma? (circle)  YES  NO

Please describe: ____________________________________________

________________________________________________________________________________
________________________________________________________________________________

Did seizures start before or after head trauma? (circle)
Has your dog been diagnosed with any other conditions listed below? (check all that apply)

( ) AIHA (autoimmune hemolytic anemia)
( ) Atopy
( ) Cancer (type): ________________________________________
( ) Hypothyroidism
( ) IBD (Inflammatory Bowel Disease)
( ) ITP (Idiopathic Thrombocytopenia)
( ) SA (Sebaceous Adenitis)
( ) SLE (Systemic Lupus Erythematosus)
( ) SLO (Symmetrical Lupoid Onychodystrophy)
( ) Other (describe): ________________________________________
( ) None

- Age at diagnosis of the condition: _____ years _____ months
- What specific test was used to determine the diagnosis for the above condition(s):

Relatives:

Circle any relative(s) of your dog who also has Addison’s disease:

Sibling  Half-Sibling  Sire  Dam  Grandparent  Offspring  Aunt/Uncle  Niece/Nephew  Don’t know

Please indicate registered name of relative(s) if known: ________________________________________

Circle any relative(s) of your dog who has an autoimmune condition other than Addison’s disease:

Sibling  Half-Sibling  Sire  Dam  Grandparent  Offspring  Aunt/Uncle  Niece/Nephew  Don’t know

Please indicate the autoimmune condition(s): ________________________________________

Please indicate registered name of relative(s) if known: ________________________________________

Circle any relative(s) of your dog who have seizures:

Sibling  Half-Sibling  Sire  Dam  Grandparent  Offspring  Aunt/Uncle  Niece/Nephew  Don’t know

Please indicate registered name of relative(s) if known: ________________________________________

Owner Signature: ___________________________________________ Date: ________________

☐ For blood sample submissions only, check here if you agree to donate the excess DNA not used directly in this study to the CHIC DNA repository. If so, download and complete the CHIC DNA forms http://www.caninehealthinfo.org/chic_dnabankapp_main.pdf Send the CHIC DNA repository application and the health survey along with the CGAP questionnaire and the pedigree with this sample. Note there is no fee associated with CHIC submission when the excess DNA is submitted through CGAP.
OWNER CONSENT FORM

PURPOSE OF STUDY
I hereby grant permission for my dog to participate in a study designed to collect DNA from dogs and their relatives to study various diseases including, but not limited to Addison’s disease and Epilepsy, in order to determine the genetic basis for these diseases. This protocol has been approved by the UC Davis Institutional Animal Care and Use Committee (IACUC), Protocol #20402.

CONSENT FOR PROCEDURE
I consent to the use of blood samples for this project, and appropriate future projects, and I will provide a pedigree with the sample, provided that neither my animal nor I will be identified in any publications, reports, or presentations.

RISKS ASSOCIATED WITH PROCEDURE
The risk involved in drawing blood is minimal. However, I do understand that my dog may experience mild redness or bruising at the collection site. Additionally, the veterinarian I have chosen to do this procedure may clip the hair to facilitate visualization of the vein. The veterinarian who will be performing this procedure is the veterinarian of my choice, and I will not hold the University of California Davis responsible for any complications associated with drawing the blood.

POTENTIAL BENEFITS
I understand that there is no guarantee that my dog will benefit from its participation in this study. However, such participation may provide veterinarians and researchers with additional information and a better understanding of canine diseases, which could ultimately influence the course of treatment or genetic testing to help my dog and other animals in the future.

COSTS TO OWNER
There is no fee for participating in this study. In the event that DNA from my dog is used in the development of commercially available diagnostic markers, I understand and agree that any proceeds or benefits from such development are the sole and exclusive property of University of California, Davis. I also understand that the University of California will not cover any charges that may be incurred for the drawing of blood or shipment of samples. If this dog’s sample is directly used in the development of a genetic test associated with this disorder, upon the owner’s written request after the test becomes commercially available, the results of the test for this dog will be provided to the owner at no cost.

CONFIDENTIALITY
I understand that any information about my dog, obtained from this study, will be kept confidential.

AUTHORIZATION
I hereby donate, assign, and transfer a DNA sample from my dog to CGAP for research purposes and warrant my authority to do so. I understand that any future use or distribution of this DNA sample will be within the sole direction and authority of CGAP. I further understand that any distribution of samples to researchers will be in a blind format that maintains the anonymity of the dog and owner identities. My intent in providing this DNA sample is to further research into canine health issues. I hereby relinquish all rights to, and ownership of the DNA sample. I have read and understand the foregoing statements and agree to allow my dog to participate in this study. To the best of my knowledge, the information I have supplied is true and accurate.

Canine Genetic Analysis Project (CGAP)
Department of Animal Science, University of California, Davis
Principal Investigators: Dr. A.M. Oberbauer and Dr. T.R. Famula
Phone: 530-752-1046, FAX: 530-752-0175
http://cgap.ucdavis.edu/

Canine Buccal Swab Submission (swab kit request at http://cgap.ucdavis.edu/)
(Please use all 3 brushes for each dog being submitted)
1. If the dog has been eating or drinking, wait 10-15 minutes before taking samples.
2. Sample one dog at a time. If you are sampling several dogs in the same session, complete the process for one dog before sampling the next dog.
3. Before opening or collecting sample, label each wrapper of the 3 brushes with the name of the dog to be sampled and the date of collection.
4. Peel open the top of the wrapper and remove the brush by its handle.
5. Place the bristle head against the inside of the dog’s cheek and swirl 10 times. Please be vigorous, since these are the only samples we will have for the dogs. Please take each sample from a different location on the cheek.
6. Allow swabs to air dry for 5 minutes. Carefully return each swab to its original wrapper.
7. Fold over the end of the wrapper and seal with a paperclip or staple (do not use tape). Do not place samples in a Ziploc® bag.
8. If you are sending only swab samples, return samples and appropriate forms via regular mail in the enclosed self-addressed, postage paid envelope (U.S. residents only).

Blood Sample Collection and Shipping Procedures (Preferred Sample Submission)
1. Please collect 2cc to 5cc of whole blood in a single purple-top (EDTA) tube. Rock the tube gently (do not centrifuge).
2. Label each sample with the dog’s registered name, owner’s last name and date. Wrap tubes in paper towels and place the blood tubes in a plastic bag, sealing the bag securely.
3. Place the samples in a sturdy box, packed so that the blood tubes do not move around (bubble wrap).
4. Include the completed questionnaire, pedigree and signed owner consent form.
5. The ideal shipping method is to keep the samples cold (ice pack) in an insulated, leak-proof container and ship via FedEx or UPS immediately following collection to arrive within 2 days of collection. Refrigerate the sample until it can be shipped. DO NOT freeze the sample at any time. For USPS, please send samples on ice packs priority 1-2 day service. Samples shipped via USPS are only delivered Monday, Wednesday and Friday mornings. Samples from other couriers can be delivered weekdays (Monday – Friday). Campus is closed on weekends and holidays. Samples may be compromised if they are shipped on a Friday to arrive on a Monday due to inadequate storage at courier facilities. Shipping containers cannot be returned. For international submissions, please check with your local courier for requirements and/or restrictions on sending biological samples and include CGAP’s Declaration of Material Shipped Form with the samples.
6. For FedEx or UPS shipments, please email jmbelanger@ucdavis.edu with date of shipment and tracking #.

Please write “Refrigerate Upon Arrival” on the outside of the box and ship to:
